PROFESSIONAL SUMMARY

Full Stack Developer with 4.3 years of experience designing and delivering scalable web and backend applications using Angular, ASP.NET Core Web API, Node.js, MSSQL, and MongoDB. Progressed from building focused feature modules to owning full project lifecycles — database planning through frontend delivery — across enterprise systems in travel, logistics, education, and HR domains. Hands-on experience with payment integrations, real-time systems, caching, and reporting solutions.

TECHNICAL SKILLS

Angular: Component-based architecture, Reactive & Template-driven Forms, RxJS Observables, custom Route Guards, HTTP Interceptors for JWT-based authentication, Lazy Loading modules, custom Pipes & Directives, Angular CLI. Hands-on experience across Angular versions 9+.

ASP.NET Core Web API: RESTful API design, ADO.NET and Entity Framework Core for SQL Server connectivity, LINQ queries, dependency injection, middleware pipelines, JWT-based authentication, Windows Services for scheduled and background tasks.

MSSQL: Stored procedures, functions, triggers, CTEs, joins, indexing and query optimization, transactions for data consistency, bulk import operations.

Node.js: REST API development, middleware design, asynchronous/event-driven architecture, modular backend structuring.

MongoDB: Schema design, aggregation pipelines, indexing and query optimization for large-scale datasets.

Cloud & Deployment: AWS S3, AWS EC2 (RDP), IIS, Docker (Basic), Plesk

Monitoring & Logging: Grafana, Application Log Analysis

Payment Integrations: Stripe, Razorpay

Real-Time & Caching: Socket.IO, SignalR, Redis Cache, LRU Cache

Authentication & Security: JWT Authentication, Role-Based Access Control (RBAC), Biometric Authentication

Reporting: SAP Crystal Reports (VS 2019)

Version Control & Tools: Git, GitHub, GitLab, Postman, Visual Studio, VS Code, SSMS, MongoDB Compass

KEY HIGHLIGHTS

- **End-to-end project ownership:** Progressed from developing individual modules and screens to handling database planning, backend architecture, API development, and frontend delivery.
- **Project delivery & production support:** Focused on end-to-end development of assigned projects while supporting existing applications in production, handling new requirements, issue resolution, and maintenance activities.
- **Requirement ownership:** Planned new project requirements, translated business needs into technical solutions, and contributed to implementation across frontend, backend, and database layers.
- **Cross-functional collaboration:** Worked with mobile application teams, and internal teams, providing APIs and supporting application integrations.
- **Database & backend optimization:** Worked on database design, query optimization, stored procedures, indexing, transactions, and data processing to improve application performance and reliability.
- **Production & deployment experience:** Involved in application deployment, monitoring, troubleshooting, and production issue resolution across cloud, server, and application environments.
- **Reporting & documentation:** Used advanced SAP Crystal Reports features to generate dynamic, variable-size PDF reports — invoices, payslips, and tax documents — adapting layout and page size to varying data volumes.

WORK EXPERIENCE

Elevado Softwares Pvt Ltd — Software Developer (started as Intern, promoted to SDE L2)

March 2022 – May 2026

PROFESSIONAL PROJECTS:

1. Sales & CRM | *Angular, ASP.NET Core Web API, MSSQL*

Built godown inventory allocation and billing screens for a sales/CRM system, with PDF/Excel report exports and DataTables-based reporting. Generated structured sales and inventory tracking reports to support order and stock visibility for business teams.

2. Rental Management | *MEAN Stack*

Expanded a carparking system into a full rental platform — tenant/property management, agreement tracking, invoicing, JWT auth, and Razorpay payment workflows. Developed scheduled Cron jobs for automated booking updates and notifications, ensuring reliable background processing.

3. HR & Workforce Platform | *Angular, ASP.NET Core Web API, MSSQL*

Designed HRM module with payroll, leave, and approval workflows; automated Crystal Reports payslips and built Excel bulk upload with validation. Implemented JWT-based authentication with Angular route guards and HTTP interceptors and delivered SignalR-based real-time notifications for payroll approval workflows.

4. ATM Operations | *Angular, ASP.NET Core Web API, MSSQL*

Restructured system architecture and optimized SQL for ATM data retrieval; integrated AWS S3 image storage and Excel bulk upload for master data. Enabled photo-based verification workflows for cleanliness and functionality audits across multiple ATM locations.

5. Education ERP | *Angular, ASP.NET Core Web API, MSSQL*

Built a multi-role ERP with real-time Socket.IO chat, biometric authentication, and Crystal Reports-based financial dashboards. Contributed to database planning and schema design supporting admin, marketing, student, and staff operations.

6. Audit Platform | *Angular, ASP.NET Core Web API, MSSQL*

Built a mall-audit documentation and reporting platform with AWS S3 document workflows and Windows Service-based automated email notifications. Tracked cleaner and employee attendance across multiple mall locations and contributed to UI/UX design for admin monitoring.

7. Logistics Management | *Angular, ASP.NET Core Web API, MSSQL*

Built end-to-end booking-to-delivery logistics workflows with role-based access control and SMS notifications. Streamlined transportation operations from booking creation through delivery confirmation and invoicing for multiple user roles.

8. Travel Booking Backend | *Node.js, MongoDB*

Designed a scalable modular backend with AI-assisted search and recommendation features using OpenAI APIs, Stripe payments, Redis/LRU caching, and Grafana monitoring. Consolidated multi-provider travel data with multilingual content support and optimized MongoDB aggregation pipelines for performance.

CORE COMPETENCIES

• Full-Stack Application Development • RESTful API Design • Database Architecture & Optimization • Payment Gateway Integration • Real-Time Systems • AI-Based Search & Recommendation Systems • Cloud Deployment • Technical Documentation • UI/UX Wireframing • Unit Testing • Production Support & Maintenance

EDUCATION

Bachelor of Science in Computer Science — Kaamadhenu Arts and Science College, Bharathiar University |
2019–2022 | 80%

LANGUAGES

• English • Tamil
